

What To Expect During a Siding Installation

Congratulations on making the decision to upgrade your home with new Siding.

We take extreme pride in supplying Superior Products combined with Superior Service. We want you to be prepared for the process.

- **FINAL MEASURE-** Next our project manager will complete a final measure on the house this will take place in the next 5 to 7 days on average, We will not schedule the time for the measure, the project manager will just show up and measure the house he will not bother you his goal is to get in and out as quickly as possible but if you see him you are welcome to introduce yourself. Once measured the products will be ordered.
- **HURRY UP AND WAIT-**After the measure it runs on average 12 to 14 weeks when we will receive the material and schedule the install. You will not hear from us during this time frame. You are welcome to call the office and talk with us as we always love talking with our customers and get an update but, we will not call you until we have all the material in and are ready to deliver and start your job.
- **TIME TO SCHEDULE-**When all the material is in we will call you and give you a delivery day and anticipated install day. Please keep in mind these days are “Weather Permitting” if its raining or to windy we can not have installers on ladders and scaffolding also if it rained 2 to 3 days before your install day that would have slowed down our anticipated finish day on that project and in turn pushed back the start day on your project. The important thing to keep in mind is if we have material at your house **YOU ARE THE NEXT JOB IN THE QUE.** You do not need to take off work for the install period, the project manager will be in touch with you and he will be checking on the job for you during the install process. If you need anything you will be able to reach out and talk with him.
- **WHAT YOU NEED TO DO TO PREPARE-**We will be hammering on the outside exterior walls, so before we show up after the job is scheduled look around on your walls and please remove and nic naks, pictures or anything that could fall off a shelf and break especially if it very important to you and place it in a safe place.
- **CLEAN UP-**Siding installs can last on average 5 to 6 days sometimes less sometimes longer depending on house size and scope of work. We want to get in and out as quickly as possible so we do not do a full clean up until the job is done. At the end of every day the crew will clean up the driveway and sidewalks but they will leave old siding scraps, waste from new siding in piles around your property as it will take away from the install time to clean all this up every day. Once the job is done they will clean up the entire jobsite place it all in the dumpster and head out, we will pull the dumpster typically the next day,
- **FINAL INSPECTION-**Our Project Manager will complete a final inspection of the completed job and collect any extra material as we always send extra material in case it's needed. If there is a final balance due he will also collect this at this time.
